PRODUCT DESCRIPTION

High-density PINK extruded polystyrene (XPS) rigid thermal insulating boards. FOAMULAR 400/600/1000 boards are manufactured using Owens Corning patented HYDROVAC® technology. Owens Corning uses blowing agents that meet or surpass government environmental requirements (Montreal Protocol).

Their outstanding compressive strength, dimensional stability as well as their excellent thermal resistance (RSI 0.87/25 mm; R-5/in.) and hydrophobic properties (0.7% water absorption) make them an excellent insulation choice for use in large civil engineering works, for roofing and terraces, road applications as well as all other building works where insulation boards are submitted to dead and live loads greater than those which can be supported by Celfort® 200, CodeBord® and Celfort® 300 extruded polystyrene rigid insulation.

Recommended Uses

Use FOAMULAR 400/600/1000 high-density PINK extruded (XPS) rigid thermal board insulation where heavy loads will be applied to the insulation. The dead load shall not exceed 1/3 and the live load shall not exceed 1/5 of the published compressive resistance. High-density insulation can be used in the following applications to help:

- reduce heat loss from freeze/thaw-sensitive soils under roads, railways, landing strips and other similar locations;
- reduce heat gain in permafrost areas where melting decreases its capacity to support traffic bearing roads or building foundations to the point of failure;
- reduce ground heat loss under concrete foundations that support heavy dead loads – i.e. pulp and paper machinery – and/or live loads – i.e. heavy product handling rolling equipment;
- reduce heat loss from automobile parking areas, pedestrian terraces or gardens situated over heated interior spaces; and
- avoid ground freezing under skating rinks, freezers – refrigerators.

To select proper insulation board compression strength, consult design engineers responsible for civil engineering and special building structures and an Owens Corning Canada regional technical support representative.

FOAMULAR 400/600/1000 PINK extruded polystyrene rigid thermal insulation boards are GREENGUARD and SCS certified for their “green” content (refer to TECHNICAL DATA) and can contribute to obtain LEED™ Certification credits when used in a building submitted to the LEED CANADA-NC Green Building Council Rating System (refer to TABLE 2).

Limitations

Owens Corning Canada Inc. does not recommend using FOAMULAR 400/600/1000 PINK extruded (XPS) polystyrene rigid thermal insulation boards in the following applications:

- In soils that may contain hydrocarbons and other petroleum derivatives, and all other products that may cause corrosion and deterioration of the polystyrene boards. Consult soils investigation reports and an Owens Corning Canada regional technical support representative.

- FOAMULAR 400/600/1000 are combustible products and their use is prohibited:
  - When in contact with surfaces whose temperature may exceed 74°C or in locations where ambient temperature will constantly exceed 74°C.
  - Where it is impossible to provide clearances required by Codes and Regulations (building, electrical, gas and oil) between the expanded/ extruded polystyrene insulation and heat-emitting appliances, chimneys, pipes, conduits and vents to these appliances and between insulation and recessed light fixtures that are not encased in CSA-approved insulated boxes.

Other precautions to be taken:

- Protect polystyrene boards from prolonged exposure to...
sunlight, which may cause surface discolouration and/or deterioration; backfill as soon as insulation is completed; keep boards in storage and in its packaging until time of installation.

- Before using adhesives, sealants or other similar products with polystyrene boards, verify their compatibility with adhesive manufacturers.

**Components**
Polystyrene insulation is manufactured from polystyrene resin and extruded into rigid boards. Recycled materials incorporated into polystyrene board fabrication are obtained from one source:
- “Post-industrial” (or “pre-consumer”) source: materials recycled from industry-wide manufacturing waste that can be recycled to fabricate polystyrene boards.

**TECHNICAL DATA**

**Applicable Codes and Standards**
  - Meets requirements of article 9.25.2.2. and 5.3.1.2.(2) (including all subsequent revisions).

**Canadian Standards (Underwriters Laboratories of Canada (ULC))**
- CAN/ULC-S701, Standard for Thermal Insulation, Polystyrene, Boards and Pipe Covering
- CAN/ULC-S102.2, Standard Method of Test for Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials and Assemblies

**American Standards:**
- ASTM C203, Standard Test Method for Breaking Load and Flexural Properties of Block-Type Thermal Insulation
- ASTM D2126, Standard Test Method for Response of Rigid Cellular Plastics to Thermal and Humid Aging
- ASTM E96, Test Methods for Water Vapor Transmission of Materials

**Health Canada/Workplace Hazardous Materials Information System (WHMIS).** Please visit www.owenscorning.ca for a current copy of the Material Safety Data Sheet (MSDS) for “FOAMULAR high density extruded polystyrene insulation”.

### Certification by Independent Third Party Agencies

**Recycled Content and Indoor Air Quality Standards**

SCS Certification (Scientific Certification Systems) for recycled materials content.

Certification based on the environmental claims certification program:

- 15% minimum certified recycled materials content distributed as follows:
  - 15% “post-industrial” (or “pre-consumer”) recycled polystyrene materials content; average for Owens Corning manufacturing facilities. rigid polystyrene insulation: CELFORT and FOAMULAR brand, (Valleyfield, Quebec);
  - “Certificate of Achievement”: manufactured by Owens Corning (various forms and sizes).

For up-to-date Certification information, go to www.scsCertified.com.

**LEED – Green Building Rating System**

- For new construction and important renovations.
- 1 point for at least 15%.
- 2 points for at least 20%.

</table>

---

(1) Refer to the LEED – Green Building Rating System for new construction and important renovations. LEED Canada-NC 1.0 as promoted by the CaGBC. (5) The recycled content of a material or furniture must be determined by dividing the weight of the recycled content of the item by the total weight of the whole item, then by multiplying the resulting ratio by the total cost of the item.

APPLICATION

Safety Measures: Applicator Protection
This product is combustible and may constitute a fire risk if not used or installed properly. Although it contains a fire-suppressing agent, the product will ignite if exposed to a sufficiently intense flame. Do not expose to open flames or any other ignition source during transport, handling, storage or use.

Preparation
Ensure surfaces to be covered with insulation boards have been inspected, notably:
- substrate solidity and level – fill others; and
- subsurface mechanical, electrical and telecommunication service lines penetrating or in proximity to insulation boards.

Installation
Carefully adjust insulation boards to obtain tight joints between each board and around electrical service boxes, piping, air ducts and framing passing through; where two layers are required, overlap all joints. Backfill insulation boards or use wood or steel pegs to avoid their displacement due to wind or flotation on water puddles generated by the rain or during subsurface work or near watercourses. Where required, adhere insulation boards together temporarily using an adhesive, to manufacturer’s requirements.

Consult an Owens Corning Canada regional technical support representative for the appropriate fastener and adhesive selection.

QUALITY CONTROL
Owens Corning Canada Inc. regularly submits its products to independent agencies that certify their environmental quality in terms of:
- Toxic chemical and volatile particle emissions affecting indoor air quality and the ozone layer.
- Recycled materials content.

AVAILABILITY AND COST

Cost Estimates
Cost estimates are readily available from a physical description consisting of drawings and a brief specification based on the information contained in this Product Data Sheet. For more information on product availability or costs, contact your regional technical support representative.

TECHNICAL SERVICES
Owens Corning Canada Inc. publishes many Technical Bulletins and offers in-depth consultation services and dew point analysis to help you select the appropriate products for your designs, and prepare details and specifications. For more information, contact your regional technical support representative.

INFORMATION CLASSIFICATION SYSTEM

Architectural Specifications
Classification in accordance with MasterFormat™ 2004 (level 4) published by CSC-DCC and CSI. Selected number and title are 07 21 13.13 – Foam Board Insulation.

Data Sheet
Classification in accordance with MasterFormat 2004 (level 5) published by CSC-DCC and CSI. Selected number 07 21 13.13.OCC FOAMULAR 400/600/1000 corresponds to Owens Corning Canada (OCC) classification for FOAMULAR 400/600/1000 high density PINK extruded (XPS) polystyrene rigid thermal insulation boards.
